

# CLIMATE CHANGE IMPACTS ON CULTURAL HERITAGE: FACING THE CHALLENGE

International Conference  
June 21-22, 2019  
Athens, Greece

Project coordinator:  
**Giuseppina Padeletti**  
(CNR, Italy)

## HERACLES Project: Mission and Vision to face the CC challenge

GA number 700395

OUR HERITAGE:  
WHERE THE PAST  
MEETS THE FUTURE

2018   
EUROPEAN YEAR  
OF CULTURAL  
HERITAGE  
#EuropeForCulture

The integrity of monuments, historical centers and archaeological landscapes and sites is nowadays increasingly threatened by **the climate change**, the related **extreme meteorological phenomena** and by the **natural hazards**.

The Cultural Heritage monuments are exceptionally vulnerable to these threats : for their **cultural importance** as a source of information on the past and a **symbol of identity**, any loss or deterioration of these outstanding assets would negatively impact on local and national communities, also for **their socio-economic value** (tourism and satellites activities, etc)

OUR HERITAGE:  
WHERE THE PAST  
MEETS THE FUTURE

2018   
EUROPEAN YEAR  
OF CULTURAL  
HERITAGE  
#EuropeForCulture

# The **HERACLES** Consortium is made of **16** partners from **7** countries

- The Project received funding from the *European Union's Horizon 2020 research and innovation programme* under Grant Agreement No 700395
- Funding: 6.564.313,75 Euro; Starting date: May 1°, 2016
- CNR coordination

OUR HERITAGE:  
WHERE THE PAST  
MEETS THE FUTURE

2018  
EUROPEAN YEAR  
OF CULTURAL  
HERITAGE  
#EuropeForCulture

## Countries object of the study: ITALY and GREECE

- The majority of the worldwide cultural heritage is in these two Countries.
- Their ancient civilisations are considered world Heritage.
- On the basis of their similar risk exposure.

**THE SITES:** *we focused on living areas representing the essence of the European Countries, often not greatly taken into account but constituting the **essence** of our Countries, our **Culture**, our **Identity**, our **Economy**, where people lives, and works*

## Archaeological site

## Living area

**Greece, Heraklion** : **Minoan Palace of Knossos**, centre of the first civilization of the Mediterranean basin, namely the Minoan civilization .

The **Sea Fortress of “Koules”** symbolises all monuments facing the risk of hazards from climatic change, such as **significant impact from the sea**, ( sea level rising, increasing intensity of extreme weather phenomena that combined with the air and land associated hazards together with increased salinity are accelerating corrosion and deterioration of materials and structures, etc)

## Living town

**Italy, Umbria, Gubbio** wants to represent all the historical monumental towns in Italy and in Europe, that were conceived and built in the past following criteria when the climate conditions were very different from nowadays and that suffers at present the effects of climate changes, that would endanger their safeguard, particularly the **hydrogeological risk ( heavy rains, flood, landslides)**. Moreover on the Apennines chain: **seismic area**

OUR HERITAGE:  
WHERE THE PAST  
MEETS THE FUTURE

2018  
EUROPEAN YEAR  
OF CULTURAL  
HERITAGE  
#EuropeForCulture

## Threats to heritage monuments/assets deriving from Climate Change and natural risks

- ✓ floods, storms, sea waves, extreme weather phenomena, etc
- ✓ effects linked to temperature variation, humidity/air composition
- ✓ environmental pollution
- ✓ others....

- ❖ structural instability
- ❖ material degradation
- ❖ corrosion
- ❖ *others...*

➤ **Governmental budget constraints limit mitigation strategies**

**Need for effective management tools for cost-effective  
maintenance and restoration :  
the HERACLES project**

OUR HERITAGE:  
WHERE THE PAST  
MEETS THE FUTURE

2018  
EUROPEAN YEAR  
OF CULTURAL  
HERITAGE  
#EuropeForCulture

## Greece/Heraklion (Koules Fortress + Knossos Palace):

On the basis of the end users requirements (**Ephorate of Antiquities of Heraklion**) and on the investigations performed on-site, was found that one of the fundamental elements is to have available:

### - **Monitoring Integrated Technologies** -

**HERACLES solution:** starting from a wide area observation (satellite) till the observation on-site of the single element constituent the monument, including the surrounding territory.

# HERACLES holistic-multidisciplinary vision/approach & ICT Platform concept

HERACLES methodology

Need of NEW INSTRUMENTS to  
OPTIMIZE the present  
MANAGEMENT of CH:

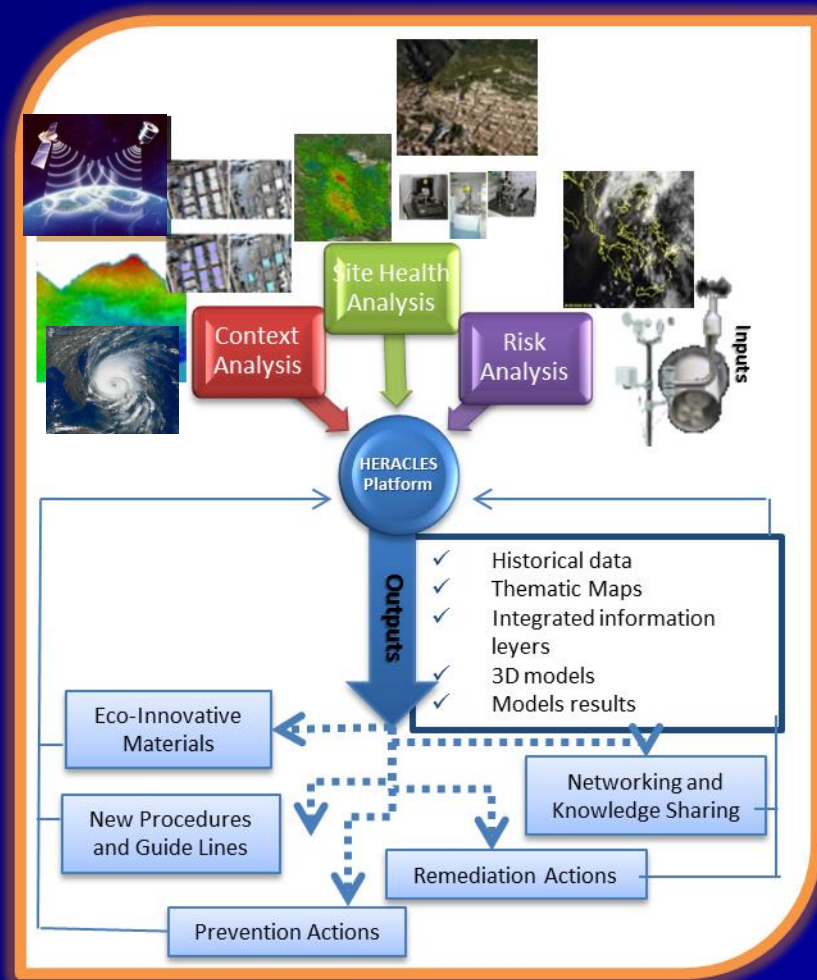

HERACLES ICT PLATFORM  
DEVELOPMENT

HERACLES Platform :

Multirisks →

multi-source data →

Many useful info available for  
the end-users

Flexible, general applicability

# HERACLES project concept

Wide area  
(*satellite*)

**Data and Info  
on different  
aspect of the  
built heritage**

Ex-situ  
(*in laboratory*)

In-situ  
(*in loco*)

OUR HERITAGE:

MEETS THE FUTURE

2018  
EUROPEAN YEAR  
OF CULTURAL  
HERITAGE  
#EuropeForCulture

# THE HERACLES TARGETS

- ✓ **Context and Site Analysis / Risk Assessment**
- ✓ **Related answers** in terms of :
  - Monitoring/preservation *actions* contributing to best practices and guidelines
  - New materials and eco-solutions for restoration and conservation (*binders, Gypsum consolidant, mortars*)
  - **Safeguard & valorization of cultural heritage, promoting the social and economical values of the Communities (*aspects related to RRI*) - education/training/events involving civil society**

# What we are studying in Greece

**Study Cases:**  
- *Koules Fortress*  
- *Knossos palace*

# Climate Change Effects

## Koules Fortress - Heraklion

Climate Change (Storm) risk  
Επιπτώσεις Κλιματικής Αλλαγής :  
Crete, October 2016

University of Athens (AMWF6)  
6-h accum. precipitation (mm)

# Climate Change Effects

**Example of structural risks due to the impact of big pieces of rock (highlighted in the yellow circle) from the breakwater structures upon intense wave events**

Points of Interest on the basis of structural issues, Fortress of Koules

- a) Sea-wave impact
- b) Areas with structural issues

## Oceanographic sensors:

Wave gauges measuring water level and sea temperature, deployed under the sea in front of the Koules fortress

Figure 26: RBRduet sensor (left) and example of an installation base (right).

# Crete island (GR)

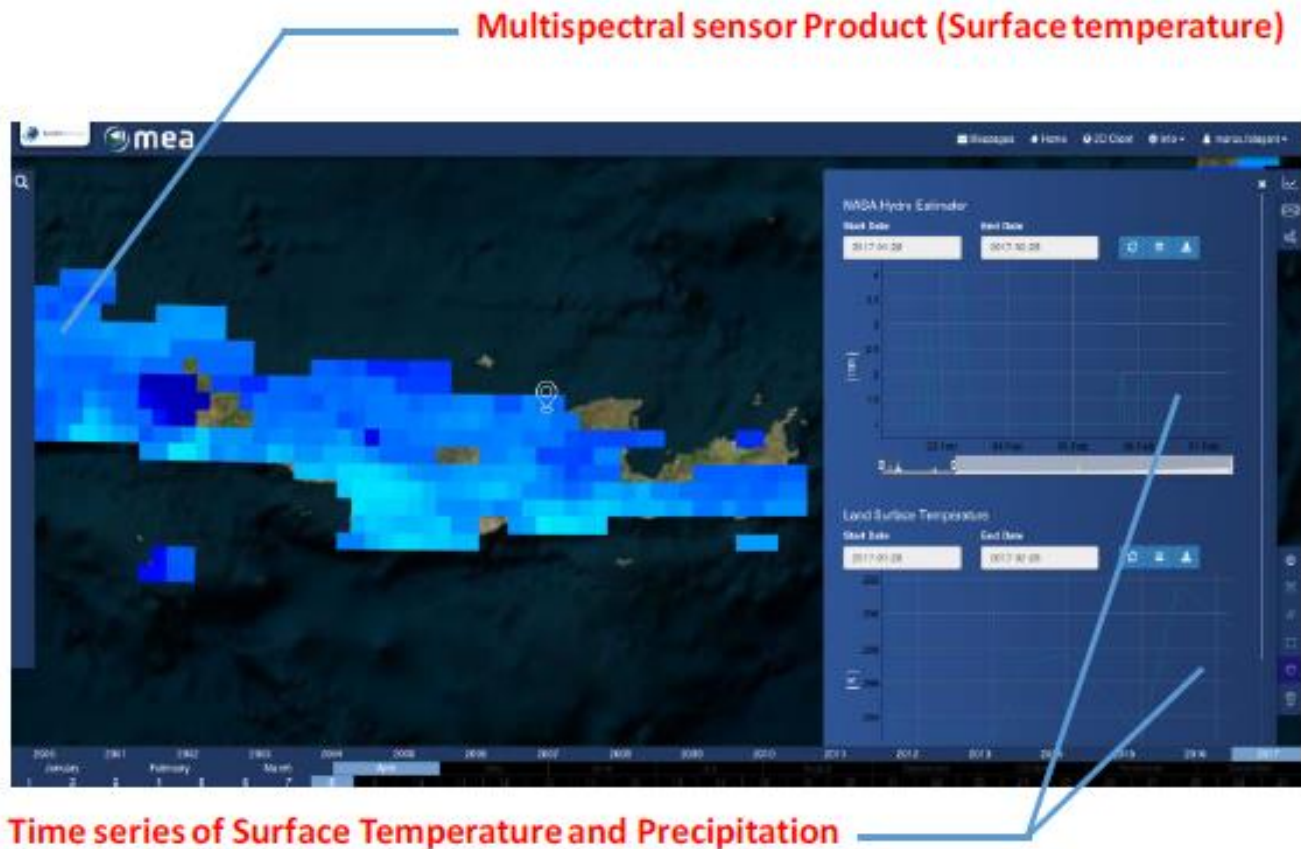

Figure 3: Meteo-Climat data platform with precipitation image product and time series of precipitation and surface temperature

**ARIA , SISTEMA, egeos**

ARIA , SISTEMA

Multispectral sensor Product - Image (Air temperature)

Multispectral sensor Product – Time series (Air temperature)  
air temperature 2014 heraklion

Figure 4: Downloaded image (colours are indicative of the spatial distribution of the temperature) and time series products of air temperature

# Monitoraggio da Satellite

## SAR interferometry basic principles

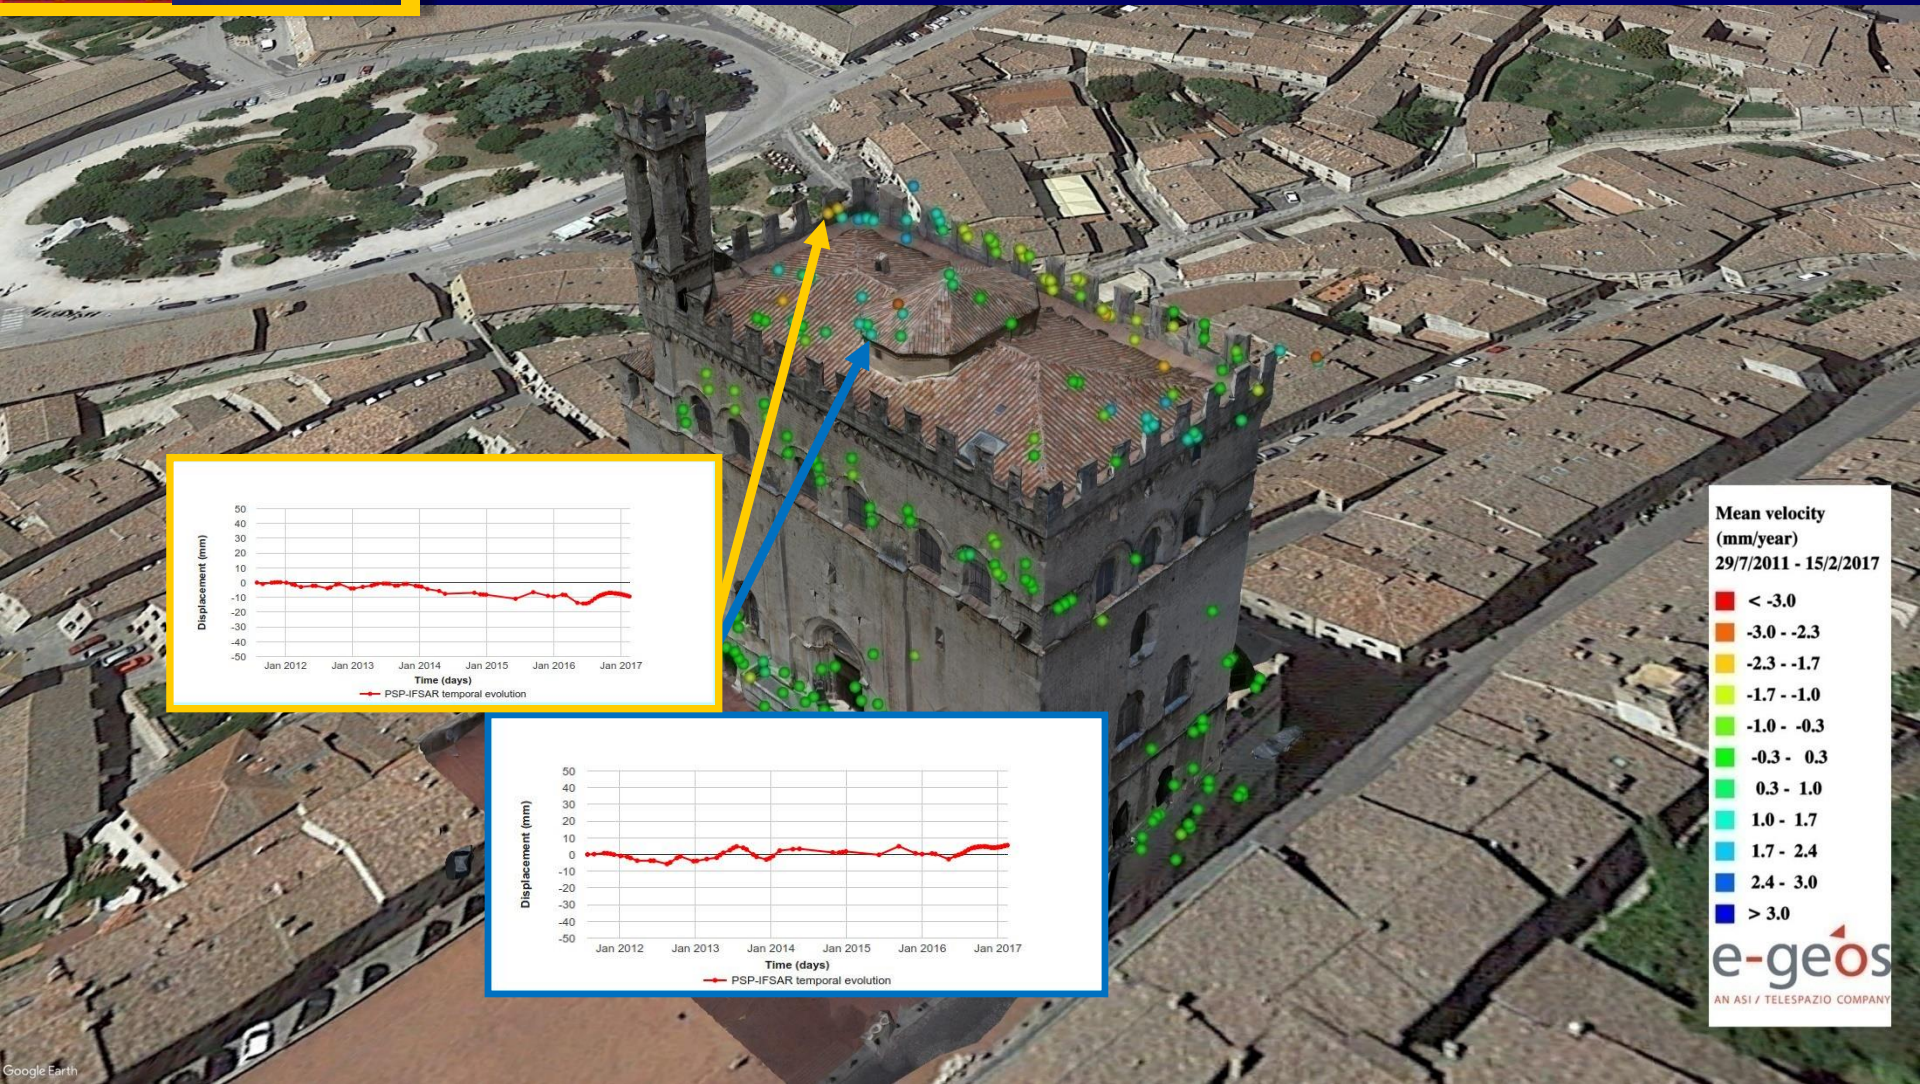

Synthetic aperture radar (SAR) interferometry is a powerful technique to determine the topography of the observed scene and possible slow surface movements due to subsidence, landslides, seismic and volcanic phenomena.

# Consoli Palace, Gubbio, PSP-IFSAR analysis COSMO-SkyMed descending dataset (07/2011-02/2017)

Monitoring a structure

Interferometric Analysis

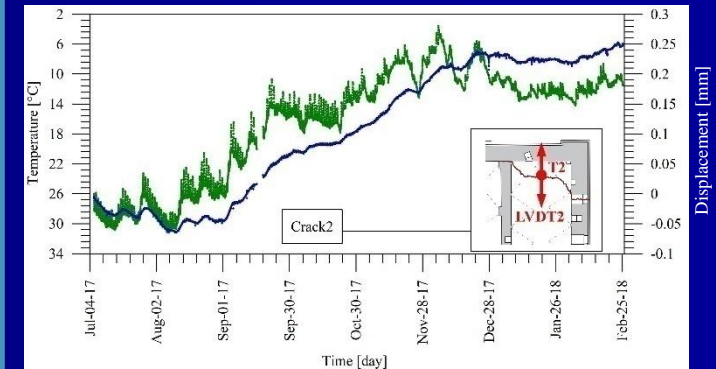

# In-situ data and SAR analysis Comparison Crack 2

## In-situ data monitoring

*Opening of crack in Autumn/Winter season*

W – West side of crack

E – East side of crack

## Maps of displacements in time

**Knossos**

**These surveys show an overall stability of the areas/structures**

**Koules**

# Koules Fortress - Heraklion

Displacement of breakwaters in the Koules area

Wave propagation of NW waves

**Over Crete: +2.2°C in the near future and + 4,2° far future and decrease of annual precipitation (-12,3% till 2065 and – 28,7% till 2100). Due to changes in frequency and directions of wind and waves in the area, the displacement of the break water and salt spray, are expected to increase**

Correlation of displacement with wave heights  
**e-geos, FORTH-IACM**

# ***Knossos Palace: Iron bars delamination***

**CNR, INSTM, CVR**

Iron bar from Knossos

Visible cracks

Vertical cracks  
(from the upper  
floor)

Cement paste

Optical microscope

Horizontal cracks  
(from corrosion)

Electron Microscope

# Knossos Palace: Concrete

**CNR, INSTM, CVR**

Concrete has been cored in different points

Thin layers (30  $\mu\text{m}$ ) were prepared and observed under a polarized microscope

**Porosity**

- main components are calcite ( $\text{CaCO}_3$ ) and quartz ( $\text{SiO}_2$ )
- a low mechanical strength, both in tension and compression.

**D 3**

**D 4**

- evaluate the thickness of the carbonated layer with phenolphthalein test.
- for the studied cases the carbonated layer resulted **almost 5-6 cm thick**, evidencing a higher carbonation level exposing the internal bars to corrosion.

**Carbonatation: 5-6 cm !!**

**CNR, INSTM, CVR, UniPG**

The corrosion cycle of steel begins with the rust expanding on the surface of the bar and causing cracking near the steel/concrete interface. As time marches on, the corrosion products build up and cause more extensive cracking until the concrete breaks away from the bar, eventually causing spalling.

**Measurement campaigns**

Samples of corrosion products were also taken (i.e. crusts and efflorescences) achieve a better understanding of erosion mechanisms and environmental factors (**FORTH-IESL, CNR, UNINOVA**).

Measurement campaigns

At the same time measurements were carried out using portable instruments: Multispectral Imaging system, LIBS, Raman (**FORTH-IESL**)

# Measurement campaigns

Special attention is given to **mineral gypsum** (selenite): Research is focused on the design and development of an innovative consolidant, which will guarantee highest durability, reversibility and compatibility for gypsum (**UoC**).

# New proposed Solutions – Cement Mortar

Figure 23 – HERACLES developed technical mortar for concrete

✓ *Cement mortar, reo-plastic, polymer modified, formulated with sulphate resistant cement (SRC) binders*

✓ *Cement mortar with high compressive strenght, adequate elastic modulus*

✓ *Cement mortar with reduced CO<sub>2</sub> permeability*

✓ *Expressly developed to restore old structures in reinforced concrete, also showing an advanced deterioration degree*

**Bulk density of set dried mortar 1850 kg/m<sup>3</sup>**  
**Average flexural strength at 28 days  $\geq 8$  N/mm<sup>2</sup>**  
**Average compressive strength at 28 days  $\geq 40$  N/mm<sup>2</sup>**

**Shear adhesion strength on concrete  $f_h \geq 1.5$  N/mm<sup>2</sup>**

**Shear adhesion strength on concrete  $f_h$  after freeze cycles - thaw  $\geq 1.5$  N/mm<sup>2</sup>**

**Compressive modulus of elasticity  $E \geq 25000$  N/mm<sup>2</sup>**

**Soluble chloride content  $\leq 0.01\%$**

**CNR, INSTM, CVR**
